

SHOW DETAILS

WHEN: March 7-11
WHERE: Las Vegas Convention Center
HOURS: Tuesday - Friday, March 7-10

www.conexpoconagg.com

North America's largest construction exhibition, ConExpo, is coming up fast. AI provides an overview of what to expect.

Vegas in bloom

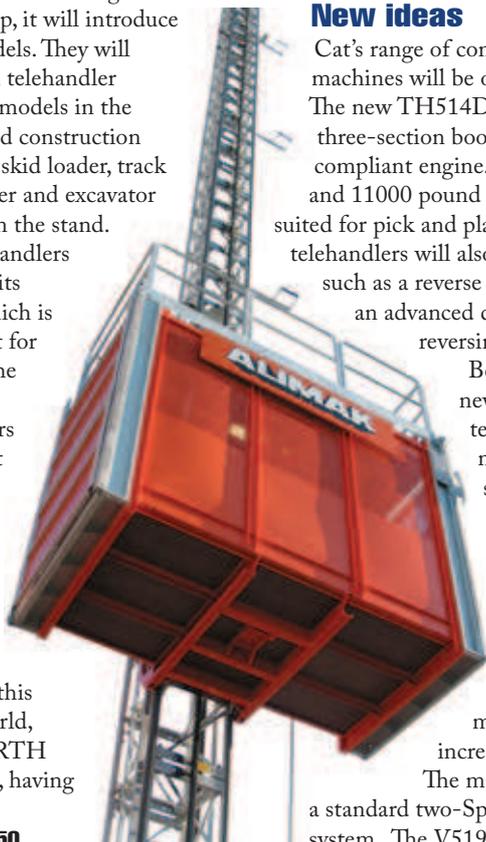

ConExpo 2017 will feature more than 2500 exhibitors - 700 of which are new - spread across 2.5 million square feet.

One of the manufacturers taking that to heart is Manitou Group, it will introduce more than 24 new models.

Magni Telescopic Handlers will remind visitors of its presence in the US, which is a relatively new market for rotary telehandlers.

Its stand will include the highest of this product type in the world, with the RTH 5.30S, RTH 5.35S and RTH 5.39S, having

Alimak Hel's Scando 650

maximum working heights of 30m, 35m and 39m, respectively. There is also a range of attachments: the Romastor fork with 2.5 tonne capacity which allows rotation of the load through +/- 90° and which, if combined with turret rotation, makes it possible to work in very limited spaces without shifting the vehicle.

New ideas

Cat's range of compact construction machines will be on display at ConExpo. The new TH514D telehandler sports a three-section boom and a Tier 4 Final compliant engine.

Bobcat will introduce the new V519 VersaHandler telehandler; a compact machine featuring a two-stage boom with a reach of more than 10 ft and a lift height of 19 ft, plus the ability to lift up to 5500 pounds.

The V519 includes the manufacturer's Bob-Tach attachment mounting system to increase utilisation.

The machine is designed with a standard two-Speed hydrostatic drive system. The V519 is well suited to operate

standard and hydraulic-powered attachments. As V519 operators lift their foot off the pedal, the machine comes to a stop. In addition, the automatic parking brake engages anytime the engine idles when it is stopped to avoid unintentional movement - an exclusive feature of the V519.

On the Xtreme Manufacturing stand there will be eleven of its heavy duty telehandlers.

Palfinger's 90m working height P900.
