

EVENT PREVIEW

LGMG North America (5084) returns to The ARA Show for the second year as a fresh company with new products and a new way of getting those products to market. Join President Craig Paylor as he debuts the new A45JE articulating boom and SR4069E scissor lift. The A45JE features simple controls, dual oscillating axles, large cushion RT tires, Trojan batteries, and a compact design that fits through a standard double door. The SR4069E features an 805-lb. platform capacity, RT capabilities, and is available as electric, diesel, or dual-fuel. LGMG welcomes conversations with all companies interested in becoming distributors for its readily available ANSI 92.20 machines.

LGMG A45JE

Manitou (5028) will show its new TJ 65, TJ 65+, TJ 80+, and TJ 85 boom lifts that take jobsite efficiency to the max with smooth platform operation and precise adjustments in tight areas. These new straight boom MEWPs can extend up to 85 ft., and the plus size models come with larger platforms that hold up to 900 lbs. unrestricted. They rotate 360°, and with their constant rotational control, the platform rotation speed will adjust according to how far the boom is extended. These new units bring the full product line to 10 straight boom and articulating MEWP models for North America.

Magni Telescopic Handlers (2687), a 2019 LLEAP award-winner for its RTH 13.26 SH, will display two machines. Magni offers 15 rotating models with lift heights from 57 to 150 ft. and lifting capacities from 8,800 to 28,600 lbs. It also has nine heavy lift models with lifting capacities from 13,200 to 110,000 lbs. The company offers dozens of different attachments for its telehandlers, including forks, winches, jibs, hooks, buckets, work platforms, and many specialty attachments (i.e. glass installation, tree removal, and more). This means that the user gets the benefit of several machines in one.

Pettibone (5270) will launch its 13 scissor lift models with work heights ranging from 18.4 to 46 ft. Offered in electric or hydraulic drive configurations, Pettibone's ANSI A92.20 compliant lifts provide personnel with reliable solutions for safely working at height in indoor or outdoor applications. Key features include a universal drive control box with LED screen and large scissor arms for excellent stability and durability.

MEC Xtra Deck Slab Scissors

MEC (3405) will feature a variety of new machines ranging from slab scissor lifts to rough terrain booms. The company will debut its patent-pending Xtra Deck (XD) slab scissor lifts, which gives an additional 20 in. of height for one person with its fold-down deck. It has guardrails on three sides that slide up to safely meet regulation height. It also has a 22-in. width, allowing access through ceiling panels and other hard to reach areas. The company will also reveal its 34-J diesel telescopic boom, a compact and lightweight model at just 8,000 lbs., which can be towed with a full-size truck.

Precision Components (5013) will feature several new aftermarket aerial replacement parts. Updates to the 2020 parts catalog include new platforms and decal kits, along with hoods and many more items. The company's inventory includes the most commonly damaged aerial parts, including platforms, decal kits, covers/hoods, glazier kits, railings, ladders, and many other key items. Most items are in stock and ship the same day.
