

TH 7.10: the latest evolution from Magni

The new Magni fixed telescopic handler is the machine with the highest load capacity in the TH range.

The outcome of a redesign of the TH 6.10 model, the TH 7.10 offers improved load charts and an astonishing lifting capacity, increased by 1 tonne (2204 lbs.). The 7.10's performance represents a clear upgrade compared to the previous model, as it can lift its maximum load of 7 tonnes (15,432 lbs.) up to 8.5 m (27 feet) (+ 16%), reach its maximum height of 9.5 m (31 feet) with a load of 6 tonnes (13,227 lbs.) (+ 20%) and support 2.5 tonnes (5511 lbs.) (+25%) at the maximum horizontal reach of 5.9 m (19 feet).

Like the 15 and 19 metre (49 and 62 feet) variants, this TH model will also be available in basic and premium versions. In premium version, the model has a more powerful Deutz engine of 75 kW and air-conditioning and radio as standard.

A cab totally restyled for operator comfort

Like the entirety of the TH 2024 range, the TH 7.10 is equipped with the new cab which made its debut on the RTH range during 2023. Designed to meet all the operator's needs, it provides unrivalled, best-in-class comfort, safety and convenience.

The cab interiors have been completely restyled; the injection-moulded panelling ensures greater durability and a better finish. The seat, courtesy lights, air flows, adjustable armrest, convenient storage compartments and sunblind are delivered alongside ample space and outstanding visibility, providing the operator with optimal working conditions.

New Magni Combi Touch System (MCTS) on-board control system

Accessed via the touch screen, the MCTS on-board software has undergone thorough graphic restyling and offers an even smoother, pleasanter user experience, with navigation by means of icons. The operator now has a new menu screen giving access to the various functions, with new features such as dedicated pre-settings: three new presets, from the most precise to the most reactive, to optimise performance in relation to the attachment used.

There is an additional improvement in the load chart screen, which allows two different display modes:

- Standard, displaying all the load bands;
- Dynamic, displaying the working area available in relation to the load being lifted.

Agility and power

Extremely compact in size, the TH 7.10 is ideal for operating in tight spaces with superb handling. With 4-wheel drive and steering, it enables full freedom of movement, reinforced by three steering modes: front, round and crab.

The powerful hydrostatic transmission provides each wheel with all the torque necessary to tackle even the toughest slopes, and agility is further enhanced by the generous ground clearance.

Levelling

The levelling system for operation on tyres enables the operator to level the machine laterally and provides him with the complete load chart on terrains with lateral gradient of up to +/8°.

Versatility

Thanks to the wide selection of interchangeable attachments, the machine can take on a large variety of jobs with the utmost flexibility. The RFID recognition system automatically updates the display with the load chart for the coupled Magni attachment. With the market launch of this new machine, Magni TH takes another impressive step forward in the development of high-performance, reliable solutions in the lifting world, with improvements not only in efficiency but in safety and comfort as well.
