LIFTING HEIGHTS
57-167 feet

DO MORE FRAMING FOR LESS!

MULTIPLE MACHINES IN 1

Rotating Telescopic Forklift, RT Crane, Work Platform...and more!

Here's what users have to say:

Nomad is a turn-key framer in business for over 30 years. Much of their work is on high density, 3-6 story multi-family structures. President Pedro Loureiro states ...

"Having a forklift that can reach the roof is critical to our operations, putting a crane on-site is nearly impossible, hiring a tower crane is very costly, so **in order to give us an edge on the market we employ the Magni's. We can literally perform all our tasks including the erection of the roof trusses and sheathing.**"

"I can honestly say that in the past several years we've completed many high-density 4-5 story projects and we haven't used a crane once"

"We also use the Magni on the typical garden-style walkup buildings...the Magni pays for itself. **Not only does it pay for itself it also helps us with installing the floor trusses where having a Magni rotator allows us to do it much faster and safer.**"

"**The Magni has proven to be versatile enough for us to be able to use for basically everything onsite.** It is a forklift so you can unload the lumber and feed the packs to your workers as you

need it. You can use it as a crane to set floor trusses and roof trusses and with the different attachments you can also use it as a man lift."

"The work platform is 3 to 4 times larger than your typical platform so when you are doing facia's, installing windows or vapor barrier, **you can get it done a lot faster and safer with the Magni.**"

"What this machine can do for your business is simple...look at all your crane costs including your operator, etc...**if you invest in a Magni you can train all your personnel without investing in a special operator**...you will eliminate the use of a crane operator and the need for a crane. On top of that you can have 2 or 3 Magni's working at the same time. **You can be feeding the building from multiple sides at the same time and do it very safely without the costs of having multiple cranes.**"

WITH MAGNI YOU WORK...

FASTER

- Off-load building materials
- Stage materials on the jobsite
- Deliver materials below grade
- Set materials faster & higher – up to 167'
- Set trusses faster & higher
- Lift more weight – up to 28,600 lbs
- “The nail guns never stop!”

SMARTER

- Replace the need for a crane by using our jib & hook attachments
- Remove the need to coordinate 3rd party services for hoisting
- Load & unload materials without moving the machine
- Operator feeds materials to themselves using our remote control saving you labor

SAFER

- Technology prevents operator from putting machine in unsafe situations
- Automatic configuration of the digital load chart for each attachment
- LMI lets the operator know where the load is within safety triangle.
- Customize speed settings for each function of the machine
- Set limits on rotation and height to prevent collisions with obstructions

MAGNI MAKES YOU MONEY!

FUNCTION	TRADITIONAL EQUIPMENT	CAN MAGNI REPLACE?	ATTACHMENT NEEDED	COMMENT
Off Loading Materials	Forklift / Crane	Yes	Forks or Rotating Forks, Jib with Hook	Reduce crane rental expense. RTH allows for faster placement and less movement to offload.
Deliver Materials Below Grade	Crane	Yes	Winch, Jib with Winch, or Hook with Web Slings	Reduce crane rental expense.
Position Material on the Site	Forklift / Crane	Yes	Forks or Rotating Forks, Jib with Hook	Reduce crane rental expense. RTH allows for faster placement and less movement.
Set Wall Panels	Forklift / Crane	Yes	Forks, Jib with Hook, Jib with Winch	Reduce crane rental expense. RTH allows for faster placement and less movement.
Set Material Over 62 feet	Forklift / Crane	Yes	Forks, Rotating Forks, Jib with Hook, Jib with Winch	Reduce crane rental expense.

THE MAGNI ADVANTAGE

Magni replaces several machines on a jobsite including a crane, forklift/lull, and manlift resulting in significant savings on crane, rental expenses, permits, logistics, and overall costs. Magni Telehandlers deliver increased productivity and safety with increased profits.
