

New Magni HTH 12.10

A new telehandler has been included in Magni's extensive range of machines: the HTH 12.10. A significant upgrade of the already popular HTH 10.10, it retains all the qualities that made the previous model famous, while introducing an important new feature.

Designed to meet the need for ever higher performance, the HTH 12.10 is the result of a careful redesign of one of Magni's most popular models, inheriting its features and further improving its performance in terms of capacity up to 12 tonnes. In fact, the addition of a new ballast offers a capacity of 9 tonnes at maximum height and 4 tonnes at maximum outreach.

The 12.10 model inherits the reliability and versatility of its predecessor, which will remain in the range. In this sense, the new model can count on the R.F.ID system for automatic recognition of the different attachments coupled. In addition, the four-wheel drive and steering, as well as the high ground clearance, ensures great manoeuvrability on any terrain.

With the launch of the HTH 12.10, Magni TH continues its active pursuit of maximum satisfaction by raising the bar for its machines.
